About BEN Energy

We are a fast growing software spin-off from ETH Zurich and University of St. Gallen. We are a young team of 15 highly motivated professionals with various backgrounds (IT, Psychology, Design) who will change the way people use energy. Our software combines psychological concepts with data mining to deliver an unprecedented energy experience and nudge households into using energy more efficiently.

Partnering with over 15 of the biggest utility companies in Switzerland, we have access to 25% of all Swiss households, with strong ambitions to grow and expand to other markets.

Our office is located in the center of Zurich (Weinbergstrasse 56/58). You can find out more about us at www.ben-energy.com.
